1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Prior art fig 9 cited in application in view of Bush et al.

Prior art fig 9 discloses variable speed brushless dc motor comprising rotor, commutation circuit and stator module, said commutation circuit comprising power circuit and signal circuit, power circuit comprising stator winding power source, four commutation switches, speed change switch, rotor position sensor circuit and commutation logic circuit, commutation switches arranged into two commutation switch sets connected in parallel to stator winding power source, stator module connected between two commutation switch sets, commutation logic circuit being adapted to connect and control on/off status of our commutation switches of power circuit, see fig 9, A and B. Prior art fig 9 lacks comprising at least two stator winding, on/off status of speed change switch controls supply of current to stator module to further selectively energize said at least two stator windings. Bush et al discloses two stator windings, on/off status of speed change switch controls supply of current to stator module to further selectively energize two windings, see fig 2, switch 36, and windings, 48,42,26. It would have been obvious to one of ordinary skill in the art to combine Prior art fig 9 with switch and windings of Bush et al for maximum torque.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Norrga disclose windings in parallel with switch. .
